

Reasons to use Palladium Accounting!

Here are a few reasons why Palladium is the fastest growing accounting software in Southern Africa.

Money-Back Guarantee

Palladium is the only company in the World that offers a money-back guarantee against data corruption.

Embedded Business Intelligence

We offer embedded Business Intelligence in all our product offerings at no additional charge allowing clients to analyse data in a 3-dimensional drag and drop basis with full graphical representations.

Microsoft Certified Software

Palladium's software is the only Microsoft certified SME Accounting software having undergone rigorous testing.

As-At (Any Date) Reporting

Our As-At reporting allows you to run all your reports at any date in history, from Customer Aging, Inventory Valuation Reports, Income Statements and Balance Sheets.

Complete Transactional History

Palladium stores all Information for Life allowing you to generate all your financial and transactional reports since business inception.

Dynamic Database Connectivity with Embedded VPN.

Palladium doesn't retain a fixed connection to the database when you're not transacting, and is not susceptible to power surges or fluctuations like other accounting software packages, fully supporting wireless networking.

Lowest Cost of Ownership

Our solid stability means your business maintains maximum up-time, all the time. No data corruption means no downtime resulting in no additional consulting costs, no lost staff productivity and no theft or duplicate costs from switching to and from manual systems.

Enhanced User Security

Set user security throughout, either by process function or granularly like amending prices on invoices. Control changes to Pricelist and even manage user access to general ledger accounts or specific warehouse access.

User-Definable Fields Throughout

Palladium make use of, optional or mandatory, user-definable fields throughout, from General Ledger, Customers, Vendors, Projects and Inventory masterfiles, as well as at document header and line level too.

Adjust Documents Securely

Optionally adjust all documents with full user security, general Ledger transactional integrity, and document user-audit trail amendment reports for completeness.

Extensive Financial Reporting

Palladium offers extensive financial reporting with Main and Sub Accounts, Departments and up to 5 levels of Cost Centres. This is further enhanced using our Projects functionality.

Financial Budgeting and Targets/Forecasts Throughout

Budget in all facets of the application including GL, Departments/Branches, Profit Centres, Customers, Vendors, Projects and even Inventory and Service Items, affording you the ability to measure the performance throughout.

Increase your Revenue with Upselling

Our Upsell Function allows you to set items as Upsell or related to another item in order to maximise your turnover. View Upsell Items Manually or automatically as screen pop-ups.

Copy Sales and Purchase History on All Processing Documents

View Customer and Vendor History at time of sale with the ability to copy the last order or selected items from multiple documents to the current document in a few clicks.

Multiple Inventory Item Images

Add an unlimited number of item images and view them at time of processing sales or purchase documents.

Multi-Warehousing and Distribution

Manage from sales order through to packing slips. Additionally assign Invoices to Containers or Vehicles for deliveries. Set Warehouse-Specific processing options.

Credit Note Authorisations

Create credit request forms and ensure the appropriate management approval for all credit notes processed.

Create "Freehand" Quotes

Create quotes for current or prospective customers with any standard or non-standard goods or services while managing mark-ups and defining preferred Vendors, all in one screen.

Project Cost Tracking and Budgeting

Track the revenue and costs of various projects, include all project info from bids, to progress payments, and even attach all communication such as tender documents. Even budget by item with Costs/Revenue and, or Quantity.

Manufacturing

Manufacture or dis-assemble items with additional costs, with the ability to Manufacture multiple finished goods items or by-products. Set items as kit items to Manufacture or Kit on-the-fly.
